

How does a fabric protector help me?

With Ultimate Fabric Protector your fabrics will resist wet soil, dry soil, water spills, drink stains, body oils, and food oils.

This premium fabric protector allows your fabrics to retain color, look better, clean up faster, and maintain their value longer. Vacuuming will remove more soil than on untreated fabrics. Dry spills will be removed with routine vacuuming. Rinse carpet with water and blot with a towel to remove any liquid spills.

Ultimate with UV Protection

A premium solvent fluorochemical fabric protector containing a UV inhibitor that helps to reduce fading from the damaging effects of the sun's ultraviolet light. Provides the same premium solvent fluorochemical fabric protection as Ultimate on upholstery, draperies, area rugs, and specialty textiles.

ULTIMATE FABRIC PROTECTOR

WATER • OIL • SOIL

WILL NOT STAIN YOUR FABRIC

Protecting your belongings with Ultimate is a must in preserving their value and appearance.

You Have Investments... Your Carpet, Upholstery and Rugs.

Now protect them with a dependable, safe fabric protector to keep them looking good and retaining their value.

What is a fabric protector?

A fabric protector provides a protective barrier on your fabrics.

ULTIMATE FABRIC PROTECTOR gives you the confidence to not worry about spills or stains caused by water, oil, or soil. Whether it is the soil tracked in from the front door, a soda spill, or a tipped dinner plate — you can quickly vacuum up the soil or clean up the spill.

Untreated Upholstery

Treated with Ultimate

Why use a fabric protector?

After treatment, spills and stains cannot penetrate your fabrics.

ULTIMATE FABRIC PROTECTOR will prevent soiling and staining. That coffee spill will bead up and be easily removed. No embarrassing stains to hide. Treatment gives all fabrics stain and soil repellancy.

Where is fabric protector used?

On any textile that might be spilled on or soiled in any way.

Your carpet needs protection against soil, water, and stains. Upholstery is subjected to soiling especially from body oils, food, and pets. Rugs often attract dust and animal hair. All of these threats can be eliminated with ULTIMATE. It can be safely applied to most fabrics including silks, velvets, and cottons.

When is fabric protector used?

Right after delivery of new furnishing or right after cleaning by an FPC technician.

ULTIMATE FABRIC PROTECTOR can be applied to new or freshly cleaned fabrics — any carpet, upholstery or rug. ULTIMATE provides a shield of protection without affecting the feel of the fabric.
